

Outdoor packaged unit

PLE 50 - 160 kW

PLUS

- » Refrigerant R454B (GWP=467)
- » High seasonal efficiency values (ErP 2021 compliant)
- » Electronic expansion valve as standard
- » High configurability and wide availability of accessories
- » Availability of standard acoustic execution or in silenced configuration
- » Production of water from -10°C to 55°C
- » Operation limit extension in heating mode due to low T air option
- » Extremely compact dimensions (up to 38 kW/m²)

Air-water unit with high seasonal efficiency and low-GWP refrigerant

PLE is Galletti's new range of air-cooled packaged chillers and heat pumps for outdoor installation featuring R454B refrigerant. R454B is a next generation A2L refrigerant with a GWP of only 467, one of the lowest on the market. This GWP value ensures that the PLE range complies with the gradual reduction of greenhouse gas emissions required by the F-GAS regulation, down to the stricter limits foreseen for 2030.

The range consists of 10 models with cooling capacities from 50 to 160 kW, available as cooling only and reversible heat pump mode.

The range's main strength is its high seasonal efficiency, which is designed to permanently reduce annual energy consumption as well as meet the minimum efficiency requirements established by ErP 2021.

In order to increase the efficiency at partial loads, PLE models are provided with tandem or trio solutions (2 compressors on a single circuit) and equipped with electronic expansion valve as standard.

The use of top quality components at the cutting edge of technology in the cooling, hydraulic, and electrical systems makes PLE chillers state of the art in terms of efficiency, reliability, and operating limits. In fact, the ability to produce water from -10°C to 55°C, and full load operation with external air from -12°C to 46°C.

The range allows high configurability from an acoustic point of view, having a wide range of accessories designed to reduce noise emissions. The advanced control, always present in the whole range, allows a continuous monitoring of the operating parameters, advanced adjustment logics, and connectivity.

PLE heat pumps and water chillers are designed for heating or cooling the water to be used in air-conditioning systems for residential, commercial, or industrial use.

The use of low-GWP refrigerant ensures compliance with the limits established by the F-GAS regulation regarding gases that potentially contribute to global warming (greenhouse gases).

MAIN COMPONENTS

Very low GWP refrigerant

Use of R454B refrigerant with low environmental impact. R454B is a next-generation A2L refrigerant with a GWP of only 467, one of the lowest on the market. This GWP value ensures that the PLE range complies with the gradual reduction of quotas of greenhouse refrigerants in the European market required by the F-GAS regulation, down to the stricter limits foreseen for 2030

Scroll compressors

The scroll-type compressors designed to work with R454B, which can be sound insulated, include internal thermal protection of the windings and are installed on special anti-vibration supports. The scroll-type compressors are equipped with an IDV valve. The IDV intermediate delivery valve technology allows the compressor to avoid losses caused by overcompression and, consequently, the additional work the motor has to perform in partial-load operation, thus saving energy and improving seasonal and partial-load efficiency from 3% to 10%.

Microchannel

The entire Chiller range has microchannel coils as a standard feature. The large heat exchange surface, the absence of a copper-aluminum interface, and the perfect flow of air make it possible to achieve the same performance while reducing the refrigerant charge by up to 40%, with obvious benefits from an ecological point of view. Microchannel coils Galletti always feature surface treatment as a standard feature in order to provide maximum safety, even in harsh environments.

Electronic valve

It is standard on the entire range and offers greater responsiveness during transients. The electronics also manage the synergistic operation of the compressors and the valve, thereby making it possible to vary overheating and maximize efficiency at partial loads.

CONFIGURATOR

The models are completely configurable by selecting the version and the options. To the right is shown an example of configuration.

Version	Field	1	2	3	4	5	6	7	8	9	10	11	12	13
PLE162HS0B		A	1	S	0	E	0	0	2	0	0	G	0	1

To verify the compatibility of the options, use the selection software or the price list.

AVAILABLE VERSIONS

Only cooling versions

- PLE..CS0B Power supply 400V-3N-50Hz
- PLE..CS2B Power supply 400V-3N-50Hz + circuit breaker
- PLE..CS4B Power supply 400V-3-50Hz
- PLE..CS5B Power supply 400V-3-50Hz + circuit breaker

Reversible heat pump versions

- PLE..HS0B Power supply 400V-3N-50Hz
- PLE..HS2B Power supply 400V-3N-50Hz + circuit breaker
- PLE..HS4B Power supply 400V-3-50Hz
- PLE..HS5B Power supply 400V-3-50Hz + circuit breaker

ACCESSORIES

A	Outdoor finned coil heat exchanger protection filters	M	0-10 V signal for external user pump control (on-board pump excluded)
B	Outdoor finned coil heat exchanger protection grille	N	Compressor tandem/trio isolation valves
C	Pair of couplings Victaulic	O	Night-time low-noise
D	ON/OFF status of the compressors	Q	Temperature probe for pump shutdown on the primary circuit
E	Remote control for step capacity limit (advanced controller required)	R	Enabling 2nd set-point / external alarm signaling via digital input
F	Configurable digital alarm board (advanced controller required)	S	Hot-wire electronic flow switch
G	Soft starter	T	Mains power analyzer for monitoring and reducing power consumption
H	Power factor capacitors	U	Unit lifting pipes
I	Refrigerant sensors	V	Set-point modification with 4-20mA signal
L	Water pipes additional insulation
